SPECIAL NOTICES.

The Railway Companies occasionally eharge carriage on our "Carriage paid" packages. If our customers will kindly pay all such demands, and forward to us the receipt, we shall recover the moncy. Orders amounting to 21s. and upwards sent, Carriage Paid, to any railway station in England and Wales; to Edinburgh, Glasgow, or any intermediate station; also to Dublin, Cork, Linerick, Belfast, Newry, and any other Town on the Irish Coast, having direct steam-boat communication with London.

FIVE PER CENT. allowed on all payments made within one month from date of Invoice.

NO CHARGE MADE FOR PACKING OR PACKAGES EXCEPT IN THE CASE OF PLANTS, WHEN A SMALL OHARGE IS MADE FOR THE MAT OR HAMPER, AND IF RETURNED, HALF-PRICE IS ALLOWED.

Post-office Orders to be made payable at King-street Post-office, Covent-garden, W.C. All Cheques to be crossed "The Union Bank of London." Any amount may be paid in Postage-stamps,

Those with whom we have not previously had business transactions are respectfully requested to send with their order a REMUTTANCE or a LONDON REFERENCE. All Foreign and Colonial orders, to ensure attention, must be accompanied with a remittance.

In giving orders, it is only necessary to fill up the accompanying Order Sheet.

It would very greatly facilitate the dispatch of business, if on EACH order the NAME and ADDRESS were written DISTINCTLY, and in FULL, and the most direct route by steam-boat or railway stated.

We do not publish a Plant List, but shall be happy to quote prices of the following

OUR SPRING GARDENS, AND HOW TO HAVE THEM ATTRACTIVE FROM JANUARY TO JUNE.

WHEN Winter first yields to the advances of gentlo Spring, irresistible in her grace and loveliness, how cagerly do we look for the first signs of returning life and beauty in the wee timid flower that seems born of the snow; in the pale Primrose, emerging in the copse from the leaves which Autumn and Winter had strewn as trophics of decay; in the Cowslip, sweetening the meads, and the Blue Bells, decking the wayside banks with grace. These have a charm all their own, by reason both of their native delicacy and of the season at which they disclose their beauties to our gaze. But why should we not have the same delight in our own gardens, or suffer the desolation of Winter to linger there, when nature has east it away and has already put on her vesture of delight? Give, if you will, the place of honour to the rich masses of colour and gorgeous display of full-bloomed beauty, in which the Summer garden proudly vaunts itself—the glow of the Rose—the brilliant seatlets of the Geranium, set off by its abundant leafage—the dazzling tint of the Verbeuas—the many-coloured spikes of the Gladioli—the stately growth of the Hollyhocks, and the thousand other flowers that offer themselves in aid of our desire to make our parternes gay and attractive amidst the glories of Summer. But there is not the least reason why the earlier months of the year should not see the garden rejoicing in beauties quite as charming; some delightful in their modest delieacy—some striking in their brilliance—not yielding oue whit to their more gaudy successors in their power to please. What can be more charming than the Snowdrop, set off by the Golden Aconite; or more effective than the many-coloured Crocus, in the endless groups and patterns which tasto and fancy new device. From the budies, more the please to the badress of the badress ere up the budies. In the many device. Even the humble Daisy may most effectively serve to make the borders gay, while the Pansy adds its rich profusion to the scene, to say nothing of the pretty Seilla Siberica, the Handwitt the exquisite Forget-me-not, which now plays so prominent a part in Spring gardening, the Anon-Polyanthus, and Ranunculus. Where, in the whole range of Flora's gifts, will be found anything more delicious than the Hyacinth, more striking than the Narcissus, more rich and stately than the Iris, more superb than the Tulip. It is astonishing that any one who enjoys the pleasures of a garden at all should omit to avail himself of the facilities offered for floral decoration during the early Spring workshould it can be humble if the second to for the facilities offered for floral decoration during the early Spring at all should omit to avail himself of the facilities offered for floral decoration during the early Spring months; and, indeed, it can only be accounted for by supposing that fortune has not given him the opportunity of seeing what marvellous effects may be produced in a Spring Flower Garden. The most successful illustration of Spring gardening that has come under our notice, is at Cliveden, the seat of the Dowager Duchess of Sutherland. The Flower Gardens there, although of large extent, are as full of bloom during the Spring months as during the Summer and Autumn; so that any one seeing them in their Spring beauty would hardly be contented to have his garden bare and desolate during six months of the year, as is too frequently the case at present. Mr. Fleming, the skilful and indefatigable superintendent of the gardens at Cliveden, has published a small volume, entitled, "Spring Gardening, by J. Fleming," price 2s. 6d. This gives lists of the plants used at Cliveden, the time at which they bloom, their culture and propagation, and a detailed account of how the beds at Cliveden were filled for two years. at Cliveden were filled for two years.

As many of our enstomers may not have Mr. Fleming's book to refer to, we offer to such a few suggestions as to the most effective arrangements for beds and borders, whether on a large or small scale, with plants and bulbs best calculated to maintain a continuous succession from the first appearance of Spring till June.

HYACINTH BEDS.

- No. 1 Bed.—Plant with Hyacinths, either mixed (Nos. 99 to 104) or in circles, lines or masses, in distinct colours (Nos. 67 to 98), edge with a line of Dog-tooth Violets, and then a line of Yellow Pansy. The Hyacinths may be intersected with groups of Crocus or Snowdrops.
- No. 2 Bed .- Plant with Red Hyacinths, intersect these with Blue Forget-me-not, and edge the bed with Single Red Hepatica, or Red Daisy. No. 3 Bed.—Plant with Blue Hyacinths, intersect these with White Forget-me-not, and edge the bed
- with variegated Arabis mollis.
- No. 4 Bed.—Plant with White Hyacinths, intersect these with Pink Silene, and edge with Single Blue Hepatica, or Blue or Purple Pansy.
- No. 5 Bed (Square) .- Formed into diamonds with Arabis variegata, the diamonds filled in with Hyacinths.

TULIP BEDS.

- No. 6 Bed .- Plant with Early Single Tulips, either mixed or in eircles, lines, or masses of distinct colours, intersect the bulbs with Myosotis, Silene, or Croeus, and edge with the lovely Seilla Siberica, or a good self-coloured Crocus.
- No. 7 Bed.—Plant with a good Searlet Early Single Talip, as Searlet Duc Van Thol or Vermilion Brilliant, intersect the bulbs with Yellow Pansy or Yellow Crocus, and edge with Suowdrops.
 No. 8 Bed.—Plant with Golden Prince Early Single Talip, intersect these with White Forget-me-not or Seilla Siberica, and edge with Purple Pansy.
 No. 9 Bed.—Plant with White Detable bulbs Pansy.
- No. 9 Bed .- Plant with White Pottebakker Early Single Tulip, intersect with Blue Forget-me-not,
- and edge with Yellow Pansy, surrounded with a line of Red Daisy. No. 10 Bed (Oblong).—Plant Early Single Tulips in geometrical figures, the lines planted with Tournesol Double Tulip (No. 559) and the figures filled in with distinct coloured Early Single Tulips, these intersected, so as to cover the ground, with Blue Forget-me-not, and edged with Yellow Pansy.
- No. 11 Bed .- Plant with Standard of Perfection Early Single Tulip, a beautiful variegated variety, intersect it with Blue Pansy, and edge with Red Daisy, or intersect with Blue Forget-me-not, and edge with Red Daisy.

4

No. 12 Bed.-Plant with Gesueriana Tulip, searlet with blue centre, intersect with the Dark Italian

Wallflower, and edge with Alyssum Saxatile Compacta. No. 13 Bed.—Plant with Double Tulips, either mixed or in circles, lines, or masses of distinct colours, intersect the bulbs with Myosotis, Silene, or Crocus, and edge with Blue, Purple, or Yellow Pansy.

- No. 14 Bed.—Plant with Rex Rubrorum Double Scarlet Tulip, intersect it with Yellow Pausy or Yellow Crocus, and edge with White Daisy or Snowdrops.
 No. 15 Bed.—Plant with La Candeur Double White Tulip, intersect it with Blue Myosotis, and edge
- with Red Daisy, or Dogs-tooth Violet. No. 16 Bed.—Plant with Yellow-rose Double Yellow Tulip, intersect it with White Myosotis, and
- edge with Blue Pansy.
- No. 17 Bed.—Plant with Double Tournesol Tulip, intersect with Collinsia verna, and edge with White Daisy.
- No. 18 Bed .- Plant with Couronne de Pourpre Double Velvety-erimson Tulip, intersect with Yellow Italian Wallflower, and edgo with Hen-and-Chicken Daisy.
- No. 19 Bed (Square) .- Formed into diamonds with Stachys lanata, the diamonds filled in with Tulips.

CROCUS BEDS.

- No. 20 Bed.—Plant with Crocus, distinct varieties. If a circular bed, plant strong lines of Yellow Crocus, radiating from the centro to the circumference, and fill in the spaces with white, purple, and striped varieties, and edge with Snowdrops or Winter Aconites; if the bed is square, or any other form, it may still be divided as suggested, or varied according to the taste of the cultivator. The Crocus will bloom very early; therefore, to prolong the beauty of the bed, intermix Pansies, blue, purple, yellow, and white, each colour distinct.
 - Square) .- Formed into diamonds with Arabis lucida variegata, the diamonds filled in with

ANEMONE BEDS.

- No. 22 Bed .- Plant with Single Anemones, either mixed or searlet, and edge with Seilla Siberica. This bed will most likely be in beauty in February, and continue a considerablo time. If Sileue be planted with these, a display will be maintained until June. No. 23 Bed.—Plant with Doublo Anemones, either in colours or mixed : the searlet variety of itself
- makes a glorious bed; or it may be used for separating the other colours, as we have recom-mended the Yellow Crocus in No. 18 Bed; or the colours may range in circles or masses. To To prolong the beauty of the bed until June, intersect the Anemones with Saponaria or Limnanthes, and edge with Blue or Purple Pansy, or Yellow Croeus.

RANUNCULUS BEDS.

- No. 24 Bed.-Plant with Turban Ranunculus, mixed or in distinct colours, as recommended for Anemones, giving the searlet the more prominent position. To prolong the beauty of the bed
- until June, interseet it with Daisies, and edge with Arabis mollis variegata. No. 25 Bed.—Plant with Scarlet Turban Ranunculus, intersect with White Daisy, and edge with Winter Aconite.

NARCISSUS BEDS.

- No. 26 Bed .- Plant with Polyanthus Narcissus ; intersect these with Primroses, Polyanthus, or Cow-
- slips; and edge with the variegated Arabis mollis, or the beautiful Narcissus Bulbocodium. No. 27 Bed.—Plant with Narcissus Pœticus, intersect with Collinsia grandiflora, and edge with Phlox frondosa.
- No. 28 Bed .- Plant with Narcissus albus plenus odoratus, intersect with Pink Sileue, and edge
- with Grape Hyacinth. No. 29 Bed.—Plant with Iris Persica, intersect with Arabis mollis variegata or Arabis lucida variegata and with circles of Scilla Siberica.

PLANT BED.

- No. 30 Bed.—If circular, plant the centre with Bluo Forget-me-not; then divide the remainder of the bed into triangles, the lines consisting of a double row of White Daisies, and the triangles filled in with the Pink and Red Daisy, the Purple, Yellow, and Blue Pansy; with n broad edging of Arabis nollis variegata, or Arabis lucida variegata. This bed may be arranged in twenty different ways.
- The foregoing beds may be modified in the arrangement of colours, and also by omitting the intersections; we would, however, in all eases recommend that the beds have a good edging, and nothing is more telling than Yellow Crocus for this purpose.
- No. 31.—A few hints on a Spring border may be acceptable. If the border is of considerable extent and well situated, it is, perhaps, more effective and pleasing than beds. Plant the back liue with Polyanthus Narcissus thus, : - :, and the following in the same manner: -2nd line, Rex Rubrorum, Double, Scarlet Tulip; 3rd line, La Candeur, Double White Tulip; 4th line, Hyaeinths in three colours; 5th line, Double Searlet Anemone; 6th line, Yellow Turban Raunenlus; 7th line, Snowdrops; 8th line, Bounie Scarlet Anenone; 6th line, Ferlow Threan Raunenlus; 7th line, Snowdrops; 8th line, Wiuter Aconites; 9th line, Dogs-tooth Violets. As these will not all bloom at the same time, fill in between the lines in the following order : 1st, Blue F orget-me-not; 2nd, Yellow Pansy; 3rd, Purple Pansy; 4th, Blue Pansy; 5th, Magpie Pansy; 6th, Pink Silene; 7th, White Daisy. The Winter Aconite and Dogs-tooth Violet, if planted close together, when done blooming their foliage will form a good edging. This border may be arranged in a great variety of ways; for instance, Italian Wall-flower might be intro-duced, besides many other early flower-plants.

The following Plants, in combination with Balbs, are extensively used in the celebrated Spring Gardens at Cliveden :-

The following Notes on the Cultivation of Bulbs have been extraoted from our "Illustrated Floral Guide":

THE HYACINTH.

The cultivation of the Hyacinth in water became fashionable in England about the year 1734. Since then its charming flowers, delightful fragrance, and easy culture, have secured for it the most favoured place among our winter and spring blooming plants. In the conservatory or sitting-room it is equally at home, and its well-being is less dependent upon the mysteries of the gardening art, or the pure atmosphere of the country, than that of almost any other what in culturation

plant in cultivation.

TIME OF PLANTING THE HYACINTH.

This must, to a considerable extent, be regulated by circumstances. Nature has undoubtedly declared herself in favour of planting the Hyacinth in October and November; yet, without disputing her authority, we would say to the lovers of this flower, uake your first planting as near the 1st of September as possible, and your last about the 31st of December. After the early part of December, Hyacinths intended to bloom in glasses would flower better if first planted in pots, and there allowed to remain till half grown, or even in bloom.

TIME OF PURCHASING THE HYACINTH.

This information is as important to the purchaser as any we can give. The first selection of Hyacinths arrive in London from the 20th of August to the 5th of September; orders should therefore be given for these as soon after that time as possible. If it be inconvenient to plant them immediately, they may be placed on a cool dry shelf till wanted.

TO SUCCESSFULLY DEVELOPE HYACINTH FLOWERS.

Light and fresh air are the great cscntials—the former gives colour to the flower, the latter imparts health and vigonr to the plant. The Hyacinth should, therefore, when in growth, be placed in the lightest situation at command, and, if possible, have the benefit of the morning sun. It should never be kept in a close, hot room, and sudden changes of atmosphere, especially from heat to cold, should be sedulously guarded against.

HOW TO CULTIVATE THE HYACINTH IN PREPARED COCOA-FIBRE AND CHARCOAL.

How TO CULTIVATE THE HYACINTH IN PREPARED COCOA-FIBRE AND CHARCOAL. This preparation completely supersedes water, moss, and sand, in all the elegant contrivances sug-gested for flowering bulbs to adorn the sitting-room and drawing-room. We recommend its use in Hyacinth glasses, fancy flower-pots, vases, jardinets, &c., where the drainage is imperfect. The preparation is free from impurities, and possesses a gentle stimulus; the bulbs root freely into it, and produce much finer spikes of bloom than when cultivated in sand, moss, or water. Another important recommendation our prepared cocca-fibre and charcoal possesses is its retention of moisture for a long time. Unless in a very hot room, two or three good waterings will be sufficient from the time of planting till the bulbs are in bloom, so that the amateur is relieved from the daily anxiety lest his favonrite group of forthcoming flowers should suffer from want of water. Place at the bottom of the jardinet, &c., a handful or so of rough charcoal, and fill up with the pre-paration ; plant the Hyacinths thickly, associating with them Snowdrops, Scilla Sibericæ, early-flowering Tulips, Narcissus Bulbocodium, free-flowering Grocus, and, if the space will admit, a few Pompon Hyacinths; cover the bulbs with the preparation, and neatly cover the surface with nice green carpet moss : the freshness of the moss will be prolonged by occasionally damping it with a wet sponge. Sprinkle the plauts overhead with tepid water two or three times a week.

Sprinkle the plauts overhead with tepid water two or three times a week.

HOW TO CULTIVATE THE HYACINTH IN WATER.

The following hints are simple, but ample. Use clean rain-water, and let it just touch the base of the bulbs; for three or four weeks keep them in a dark, cool situation. Avoid all disturbance of the rootlets; therefore, never change the water while it remains sweet. As a purifier, place a piece of charcoal in the glass. Never suffer dust to remain on any part of the plant, but remove it daily with a camel-hair brush and water.

HOW TO CULTIVATE THE HYACINTH SUCCESSFULLY IN MOSS.

At the bottom of the jardinet, &c., lay a handful of charcoal, on which place clean moss, and firmly with tepid water, two or three times a-week, through a fine rose, till the plants are in bloom.

HOW TO CULTIVATE THE HYACINTH IN POTS.

This is by far the most important method of cultivation. At any stage of growth, the Hyacinth can be removed from its pot without injury, and arranged either in jardinets, flower-baskets, vases, transferred to Hyacinth glasses, or plauted in the open border. With a little management, the beauty and delightful fragrance of this spring favourite may be enjoyed from the beginning of January to the end of April, either in the sitting-room or conservatory.

either in the sitting-room or conservatory. A free, porous soil is indispensable, and one composed of equal parts of turfy loan, thorougbly rotted cow-dung, and leaf soil, or, instead of the latter, our prepared cocoa-fibre and charcoal, adding about one-eighth part of sharp sand, all of which should be well mixed before being used. This compost, however, cannot always be commanded; use instead good garden loan, mixed with silver sand, and our prepared *Cocoa-Fibre and Charcoal*. For one hulb, use a four or four and a-half inch pot; for three bulbs, a five and a-half inch pot will be sufficient. At the bottom of the pot place some pieces of potsherd or *charcoal*, and on this some *rough pieces* of turfy loau, to insure good drainage; then fill the pot with the prepared soil to within an inch of the top, placing the bulh in the centre, or, if three, at equal distances apart, pressing them lightly into the soil, and filling up, leaving only the crowns uncovered; moderately water, and place them anywhere out of doors, on coal ashes, or anything that will secure good drainage; then fill the spaces hetween the pots with coal ashes, leaf soil, old tan, or common cocoa-fibre, and with the same material cover the pots over two or three inches. In five or six weeks the pots will be full of roots, and may then be removed as required. and may then be removed as required.

THE SUCCESSFUL CULTIVATION OF THE HYACINTH OUT OF DOORS.

The universal application of this levely and early spring flower to the decoration of the flower garden, illustrates the manner in which the reduction in the price of an in-door popular favourite leads to its

extensive cultivation in the open ground. Well does the Hyacinth deserve the most prominent position both in flower heds and in borders—the delightful fragrance, imposing massiveness, exquisite symmetry of its flowers, and perfect certainty of blooming, make it at once the most desirable of spring bedding plants.

blooming, make it at once the most desirable of spring bedding plants. If the soil be light or medium, it simply requires to be deeply dug and well worked; if heavy, besides deep digging and well working, the bulbs should be surrounded with sand, or, better still, two good handfuls of cocoa-fibre; if wet, or subject to occasional floodings, drain the ground with a series of drains, three feet deep and ten feet apart, or raise the hed six inches above the general level. When manure is added, use thoroughly rotted cow-dung or leaf soil; and for winter protection coccoa-fibre is best. In planting, the crown of the bulb should be four inches under the surface, and to produce a very effective display, the bulbs should be planted six inches apart. PREPARED COCOA-FIBRE and CHARCOAL for HYACINTH GLASSES, CHINA BOWLS, small jardinets, &c., 2s. per peek, 6s. per hushel. Directions how to use the Preparation sent with each parcel. PREPARED COCOA-FIBRE and CHARCOAL for large jardinets, vases, fern cases, &c., 1s. 6d. per peek, 4s. 6d. per bushel. Directions how to use the Preparation sent with each parcel. Suitable Charcoal for placing at the hottom of jardinets, vases, plaut cases, &c., 1s. per peek, 3s. per bushel.

bushel.

STANDEN'S GARDENERS' AND AMATEURS' FRIEND,

The richest fertilising compound known : the ingredients being chemically fixed, the Manure may be freely used in the Conservatory and other Plant Houses frequented by ladies, where disagreeable smelling manures could not be nsed.

Mr. CHARLES TURNER, of the Royal Nurseries, Slough, one of the most eminent and successful cultivators of Azaleas, Camellias, &c., has used THE GARDENERS' AND AMATEURS' FRIEND with the greatest success to these and other plants. Mr. JOHN DAVENPORT, late of Buile Hill, Pendleton, well known as one of the most successful fruit growers, states in his testimonial, that he found THE GAR-DENERS' AND AMATEURS' FRIEND superior for Fruit Trees in pots to any other form of manure he had ever tried. Mr. JOHN SMITH, late of Abney Hall, near Manchester, n most enthusiastic and successful plant grower, has for years used THE GARDENERS' AND AMATEURS' FRIEND for Azaleas, Camellias, Ixoras, and most Stove and Green-house Plants, with results which fairly superised him. Mr. YOUNG, West Hill House Gardens, Highgate, used this manure to Pot Vines, Foliage Plants, &c., nlso Cauliflower, Onions, Celery, &c., and the results have been highly satisfactory.

Mr. YOUNG, West Hill House Gardens, Highgidt, used this manufer by for these keines keines for the second s

As this Manure only requires to be sprinkled upon the surface of the soil in a dry state, and but a little of it is necessary, the saving of labour in its application as compared with the time and labour which would be required to apply manure water in sufficient quantity to produce anything like a similar result, is as ten times the cost of THE GARDENER' AND AMATEURS' FRIEND.

THE GARDENERS' AND AMATEURS' FRIEND, No. 1, should be used for most kinds of Hard Wooded, Stove, and Greenhouse Plauts, Roses, Fruit Trees, and Vegetables. Sold in 1/. and 2/6 Sample Canisters; and in Bags, 5/6, 10/6, and 21/.

THE GARDENERS' AND AMATEURS' FRIEND, No. 2, is suitable for all kinds of Soft Wooded, Stove, and Greenhouse Plants, Annuals, Bulbs, &e. Sold in Sample Canisters, 1/ and 2/6; and in Bags, 5/6 and 21/.

STANDEN'S DEODORIZING COMPOUND, valuable for Neutralising all Offensive Odours arising from whatever eause; also, for fixing Aumonia, &c. Sold in 1/ and 2/6 Canisters.

THE PAXTON FUMIGATOR. Price 12/6.

Illustrated in Spring Catalogue.

HYACINTHS.

The varieties thus * distinguished arc single; their flower trusses are generally characterised by being large, compact, and handsome, composed of a multitude of bells closely set on the stem, each bell having but one circle of petals. Those indicated thus † are double; the flower spikes are not generally so large and compact as those of the single varieties, but arc more massive in appearance; each bell consists of several circles of petals.

PAXTONIAN SECTION OF HYACINTHS. IN DISTINCT COLOURS.

THE FOLLOWING MODERATE PRICED HYACINTHS ARE THE BEST ADAPTED FOR GROUPING, MASSING, BEDDING, RINBONING, RUSTIC BASKETS ON LAWNS, FLOWER BOXES, VASES, &c.

15 In giving Orders the Marginal Numbers will be sufficient, but the date of the Catalogue must invariably be specified.

POMPON, OR MINIATURE HYAOINTHS.

The Hyacinths we have enumerated under this heading are dwarf in their growth, producing neat The Hyachula we have enable entertained under this heading are dwarf in their growth, producing heat compact spikes of bloom, and may be grown in very small glasses, or small fance pots; also in masses of from six to eighteen in old china, crystal dishes, jardinets, and any other elegant contrivance for the drawing-room; they may also be associated with Sella Siberica, Crocus, Snowdrops, Tulips, Narcissus Bulbocodium, and other bulbs. In such articles they will be found to succeed best in "our Prepared Cocoa Fibre and Charcoal," and the surface covered with nice green carpet moss, or Lycopodium denticulatum.

Early Flowering Dwarf White Roman Hyacinths; these, if planted early in September, and gently forced, will be in bloom in November; they should be grown in groups of from 3 to 12, in 4 to 105 7 inch pots ; 25s. per 100 ; 3s. 6d. per dozen.

NAMED HYACINTHS FOR GLASS OR POT CULTURE IN-DOORS.

THE * INDICATES THE VARIETIES WHICH ARE BEST ADAPTED FOR GROWING IN THE NUMEROUS ELEGANT CONTRIVANCES FOR THE CULTURE OF THE HYACINTH; THEY ARE ALSO THE BEST ADAPTED FOR VERY EARLY FORCING.

THE [†] DENOTES THE DOUBLE VARIETIES; THESE SUCCEED ADMIRABLY WHEN CULTIVATED IN THE OPEN GROUND OR IN POTS, BUT CANNOT BE RECOMMENDED FOR EARLY FORCING, OR FOR ANY OF THE MANY ARTIFICIAL MODES OF OULTIVATING THIS FAVOURITE FLOWER. THE MOST SUITABLE VARIETIES FOR EXHIBITION PURPOSES ARE MARKED "EX."

In confirmation of the opinion we have annually expressed of the general superiority of single over double Hyacinths, we may state that the finest varieties exhibited last Spring at both the Metropolitan and Provincial Flower Shows were single; it is therefore our practice, when the selection is left to us, and the bulbs are to be grown in glasses, jardinets, and the like, to send single varieties only, but if they are required for pot culture, we send both single and double. If so In accordance with our annual custom we have again rejected from our list several inferior kinds, and replaced them with varieties, the superior excellence of which has been established beyond doubt

doubt.

OUR OWN SELECTION OF HYACINTHS FROM THE FOLLOWING SPLENDID COLLECTION,

Embracing only such varieties as we know to be most worthy the attention of amateurs.

323 *Heroine, primrose, large truss, ex...

Easily cultivated, deliciously fragrant, and valuable to associate with the Hyacinth for winter and spring blooming. GULTURE IN-DOORS is similar to that recommended for the Hyacinth. The bulbs being large, we recommend one for a five-inch, three for a six-inch, and six for an eight-inch pot. CULTURE OUT OF DOORS is exactly the same as that of the Hyacinth, except that the crown of the bulb should be five inches under the surface. Time of planting and purchasing is the same as that recommended for the Hyacinth.

forced, these may he had in bloom before Christmas.

GARDEN NARCISSUS.

Showy Spring flowering bulbs, which occupy an important position in mixed borders. They grow freely in almost any soil, and are very effective planted in marginal lines, and grouped in shrubberies and woodland walks. N. Bulbocodium and N. Nanus make pretty edgings and excellent pot plants.

JONQUIL NARCISSUS.

These are graceful and pretty, and are much prized for their fragrance. They are valuable for the decoration of the conservatory, sitting-room, and flower garden, and require the same cultural treatment as Polyauthus Narcissus, except that three or four roots should be planted in a four or five-inch, and five or six in a six-inch pot, and should not be forced till the turn of the year.

THE TULIP.

EARLY TULIPS.

For Winter and Spring gardening, Early Flowering Tulips, double and single, are indispensable, and whether grown in pots, ornamental vases, jardinets, &c., for in-door decoration, in flower boxes, rustic vases, or in the open ground, their hrilliant and diversified colours produce a pleasing and staiking effect. Their extreme hardiness, certainty of blooming, and the absence of all difficulty in their endi-vation, distinctly entitle them to a preference in the choice of occupants for the Spring flower garden, while their cheapness enables every lover of a flower garden to plant extensively. Those who may only have small shaded fown gardens poed not be afraid to plant Tulips freely ; we

Those who may only have small shaded town garden to plant categories of the small shaded town gardens need not he afraid to plant Tulips freely; we can assure them that they succeed well even in such positions, and remain longer in bloom than if grown in situations where they would be exposed to the influence of the sun.

EARLY SINGLE TULIPS.

No Tulips display so great a variety of delicate, striking, and attractive colours as these. CULTURE IN POTS is the same as recommended for the Hyacinth; but to produce an effective display three bulbs should be planted in a four or five-inch, and five in a six-inch pot. They should be grown close to the glass, and during fine days have abundance of air. Those intended for early blooming should be gently forced as soon as the shoot appears. CULTURE OUT OF DOORS precisely that of the Hyacinth, planting the bulbs four to six inches apart, and keeping the crown of the bulb three inches under the surface; during severe weather protect with a thin coarting of litter or coccea fibre.

thin coating of litter or cocea fibre. TIME OF PLANTING FOR OUT-DOOR DECORATION.—The early part of November, or as soon after as convenient. We have planted the Tulip as late as Jannary, and have had a splendid display.

EARLY DOUBLE TULIPS.

The leading features in these are their massive forms, brilliant, diversified, and beautiful colours; admirably adapting them for beds on the lawn, terrace, or flower garden, and for edgings to Rhododendrons, Azaleas, and Roses, and for planting in the flower and shrubbery borders in groups of three or more. CULTURE IN POTS, and other elegant contrivances to adorn the drawing-room and conservatory, is the same in every respect as for the Early Single Tulip; the best for such being indicated with a *. CULTURE OUT OF DOORS.—Same as recommended for the Single Varieties.

PARROT TULIPS.

The Parrot Thlip has a singularly picturesque appearance; the flowers are large and the colours brilliant, so that when planted in flower borders, and the front of shrubberies, they produce a most striking effect. When grown in hanging baskets, and so planted as to cause their large gay flowers to droop over the side, the effect is remarkable and unique.

CROCUS.

For in-door decoration the Crocus properly managed is very useful, and for the flower garden, shrubbery borders, flower boxes, rustic vases, &c., indispensable. When used as an edging to beds two or three lines deep, or to form broad marginal lines in distinct colours, or in various colours blended, the effect is remarkably fine, while the season at which they bloom adds greatly to their value. We have seen long broad bands of golden yellow, of pure white, and of deep purple Crocus, also fancy designs, and groups and masses containing from 10 to 1,000 bulbs, expand with such effect in the mid-day sun, as to elicit the greatest admiration. The bulbs being so exceedingly cheap it is surprising they are not more exten-sively cultivated in flower gardens, shrubberies, and lawns. CULTURE IN THE ODORS, TL is absolutely necessary to ensure success that they are well supplied with water, kept close to the glass, and have abundance of *fresh air*. CULTURE IN THE OPEN GROUND.—They may be grown in almost any soil and situation. Plant three inches deep, and not more than two inches apart. The depredations of mice on the Crocus may be prevented by placing pieces of the Crown Imperial bulb near where the roots are planted.

prevented by placing pieces of the Crown Imperial bulb near where the roots are planted.

NEW SEEDLING DUTCH CROCUS.

The varieties which constitute the following section are characterised for their large flowers, rich and beautiful colours, and should be planted wherever conspicuous masses are required, and as edgings for select beds, &c. They are also the proper sort for in-door culture.

BULBOCODIUM.

619 Vernum, best known as the *Red Crocus*; blooms about a fortnight before the ordinary Crocus, and, like it, may be cultivated in-doors. *Purple red* . . . per 100, 10s. 6d. . . . per doz. 1s. 6d.

SNOWDROP.

The effect of the Snowdrop is very greatly enhanced by planting thickly either in lines three to six bulbs deep, or in large masses, in situations where they can remain undisturbed for years; the best positions being close to the edges of beds, flower and shrubbery borders, and on grass lawns. In the latter place they can be planted by simply making holes in the turf five inches deep with a dibber, dropping in two mehes of fresh soil, then three bulbs, and filling up with soil, keeping the holes about three inches apart. They may also be planted in lines, figures, or any other way which fancy may dietate; but to be at all effective for the first few years after planting, the bulbs must be put in thickly, and to this the price can be no impediment.

SPANISH IRIS.

COLLECTIONS OF THESE EXHIBITED AT THE GREAT LONDON FLOWER SHOWS WERE MUCH ADMIRED. The flowers of this section, though smaller than the English varieties, are not the less interesting and pretty, and as they are in bloom about a fortnight earlier, and possess a distinct character, they constitute a valuable link in the succession between spring and summer flowers.

The varieties which constitute the following collections are the very best in cultivation. From the want of space we omit the names and descriptions, but these will be found in former editions of our catalogue.

THE GLADIOLI.

This grand Genus may be divided into two really important sections—Summer and Autumn bloom-ing: Ramosus and its seedlings flowering in July and August; Gandavensis and its seedlings blooming in August, September, and October. As a cut flower for filling vases, &c., the Gladiolus is unsurpassed; a flower-spike cut as it is coming into blossom will continue to develope its flowers in water, and last as long as if it had not been cut.

EARLY-FLOWERING GLADIOLI VARIETIES OF RAMOSUS.

CULTURE OUT OF DOORS.—Plant for succession in December, January, February, and March. Should the soil be well drained, it will simply require deep digging and well working, adding as the work proceeds plenty of thoroughly rotted manure; should it be wet, or of an adhesive character, besides deep digging and well working it must be thoroughly drained. Plant the bulbs four inches deep, and, if grown in clumps, six inches apart; but if grown in beds or lines, they ought to be planted six inches apart in the lines and the lines eighteen inches asunder. The first plantings should be protected by a few inches of stable litter, or, where it can be obtained, cocca-fibre, which is the cleanest and best article for this purpose. If these are required for in-door decoration, the bulbs may be grown in the reserve garden, and when coming into bloom lifted, potted, and placed in the greenhouse or conservatory. So treated they will bloom as well as if they had been grown in pots. TIME OF PURCHASING THE VARIETIES OF RAMOUS.—The roots arrive from Holland the latter part of October, and as soon after that time as possible they should be procued, and kept in a dry place.

of October, and as soon after that time as possible they should be procured, and kept in a dry place.

THE PAXTONIAN SECTION OF EARLY-FLOWERING GLADIOLI,

For bedding, massing, &c., consists of cheap free-flowering sorts, with rich and strikingly beantiful colours, such as would be conspicnous in centres of large beds, flower borders, amongst Rhododeudrons, Azaleas, &c.

OUR OWN SELECTION, READY TO SEND OUT END OF OCTOBER.

PAXTONIAN SECTION OF AUTUMN FLOWERING GLADIOLI (Var. Gandavonsis).

The demand for these being great, to prevent disappointment early orders are particularly requested. The varieties enumerated under this heading are stately in growth, brilliant in colour, and planted in intervening spaces amongst evergreens, in lines in the front of shrubberies, or rising from amidst the foliage of American plants, or in beds, or almost any situation, they produce a magnificent display. The colours range from white to rose, from rose to deep crimson, and from crimson to bright orange, flame, and searlet searlet.

CULTURE.—The same as recommended for the Ramosus section. TIME OF PLANTING.—On light well-draued soils the bulbs may be planted in March; but on stiff soils, and such as are somewhat retentive of moisture, the middle of April will be early enough. TIME OF PURCHASING.—The bulbs arrive from France about the beginning of December, and should be procured as soou after that time as possible, and kept in a dry cool situation till wanted.

rea as soon after that time a	io he	09910	, .	and	copt m	a dry coor situation the wanted.

IXIAS, SPARAXIS, TRITONIAS, AND BABIANAS.

UNDER GLASS THEY FLOWER IN MARCH AND APRIL, OUT OF DOORS IN MAY AND JUNE.

THESE are amongst the most graceful, attractive, and beautiful of Cape flowering bulls. They differ con-siderably in style and habit of growth, but, being closely allied, they require the same cultural treatment. FOR IN-DOORS. Plant in October or November five or six bulbs, in a five-inch pot, using a compost of turfy-loam, peat, or leaf mould mixed with clean sand. Make the soil moderately firm about the bulbs, then place them in a cold pit or frame, plunging the pots in ashes or coccoa-fibre, and withhold water till the plants appear, then give sparingly at first. The lights should not be kept on except during wet or fursive weather.

For OUT OF DOORS. Choose a light loamy soil with a due south aspect (the hotter the situation the better), and if possible backed by a wall or greenhouse. Plant the bulbs six inches deep and four inches apart, surrounding them with an inch of sand. Two or three inches of dry leaves laid on the surface will be sufficient winter protection.

There are but few situations in this country where these plants succeed well entirely ont of doors. No one need, however, be deprived of a bed of these superb flowers, if they will only plant three bulbs in a four-inch pot; treat as recommended for in-door culture; then in April or May remove them from the frame, and plunge the pots where intended to bloom.

THE LILY (LILIUM).

The Lilium is as well adapted for the ornamentation of the conservatory, sitting-room, and verandah, as it is for flower-beds and borders; some of the varieties, however, are unore desirable than others for in-door culture, and these we have indicated with a *. The height of each is given in feet. For IN-Doors.—Use a good mellow soil, composed of equal parts of leaf-mould and loam, with a little peat if at hand, and one-sixth part of silver sand. A twelve-inch pot with six strong bulbs of Lilium hancifolium planted in it will furnish a specimen of no ordinary beauty. Lilium auratum (the Queen of Lilies) seems to thrive best by being kept in smaller pots than are suitable for the other varieties. It is one of the most gorgeously beautiful and deliciously fragrant plants in cultivation, and it is so accom-modating in its habits, that any one possessing a greenhouse, however small, may grow it with the errorest success. greatest success.

For our of Doors .- A light or medium soil ie best. Plant the bulbs five inches deep, and for the first winter place on the surface a few dry leaves.

OUR OWN SELECTION.

THE RANUNCULUS.

A truly elegant and beautiful flower, combining with the most diversified shades and colours, an exquisite symmetry and compactness possessed by few plants. As a cut flower it is quite as useful as the Rose, while for bedding, massing, and edging, either in separate or mixed colours, the effect produced is mag-nificent; its close hahit of growth and rich distinct colours make it all that the most refined taste could desire for ribboning or any other style of gardening. CULTORE,—For successional blooming, plant the Turban varieties from October to January, and the Persian from January to March. The Ranunculus succeeds hest in a somewhat moist soil, but any soil, properly prepared, will grow it to perfection. Plant on a dry day, when the soil works kindly; draw drills two inches deep and five or six inches apart, sprinkling a little sand at the hottom of the drill. The tubers should he firmly pressed into the soil, with the claws downwards, and covered with sand, then with soil, keeping the crown two inches under the surface; during severe weather, cover the bed with dry litter, leaves, or old tan ; but the covering must be removed before the plants appear. Ranunculus roots are so remarkably cheap, that we should recommend (except in the case of named warieties) immediately they have done blooming, to dig up the beds and put in the summer and autumn blooming plants.

blooming plants.

THE PAXTONIAN SECTION OF DOUBLE PERSIAN RANUNCULUS

Is composed of varieties we have selected from several extensive collections, on account of their large handsome flowers, brilliant colours, and adaptation for massing, bedding, clumping, and ribboning.

THE ANEMONE.

Amongst the diversified forms of floral beauty which enrich the flower garden, from the first opening blossoms of Spring to the last rose of Summer, the Anemone takes a very prominent place, possessing many points of interest and special characteristics of colour. Its blossoms are of the most dazaling hues of scarlet, purple, and blue, self coloured and striped. The foliage is elegantly serrated, and the growth is neat and compact, so that in beds, groups, ribbons, or as an edging to Tulip or Hyacinth beds, arranged either in distinct colours or mixed, they produce a unique effect. The flowers of the Double Anemone are extremely handsome; they have outer guard petals, re-sembling a semi-double Hollybock. If planted from October to December they will bloom in succession during the early Spring months, while those planted in February and March will bloom from April to June. The Single Anemone (*Wind Flower*), with its beautiful poppy-like blossoms, may be had in bloom at pleasure (*weather permitting*) from February to December, and, in sheltcred nooks, even in January, by simply arranging the time of planting. CULTURE_—The Anemone delights in a light rich loamy soil, but generally succeeds in any which is well drained. Sca-sand, or a little salt mixed with the soil, is a good preventive of mildew; in other respects, the culture and after management should be precisely the same us that of the Ranunculus.

PAXTONIAN SECTION OF THE DOUBLE ANEMONE.

The varieties in this section have been selected for their large flowers, rich, beautiful, and diversified colours, and will be found well suited for the purposes of massing, edging, and ribboning, for which the Anemone is so admirably adapted.

THE FAR-FAMED BELLA-DONNA AND GUERNSEY LILIES.
THE TALL TABLE DEBLIC DOTATION OF THE PARTY

The flowers of the beautiful Guernscy Lily are brilliant searlet, and in the sun's rays appear as if spangled with gold-dust. The Bella-Donna Lily is white, flushed with rose purple, very handsome. These hulhs arrive from Guernsey *early in September*, with the flower-huds ready to expand, and hy the end of the month they are in full bloom. Orders should therefore he given before the 15th September.

FRITILLARIAS.

Miniature Crown Imperials, with singularly marbled flowers. They are very interesting and pretty, succeeding in any common garden soil.

1178 20 in 20 named varieties . . . 55. .

1174 Choice mixed varieties, 10/6 per 100; 1/per doz. | 1175 Fine mixed varieties, 7/6 per 100; 1/per doz.

ACHIMENES.

A genus of truly splendid plants, succeeding equally well in pots, pans, and hanging-baskets; com-bining with great individual beauty a variety of rich and brilliant colours rarely to be met with. CULTURE.—Use a compost of peat, loam, and leaf-soil. Plant the tubers 14 inches apart in the pot, pan, or hanging basket, in which they are to be bloomed, and cover them with about an inch of the com-post. To keep up a succession, commence starting them in heat in January, and as one lot is taken out another should be put in, till May. e d

SCILLA AND MUSCARI.

S. Amœna and S. Siberica, are of the most lovely azure bluc, growing three inches high, and flower-ing as they do in March, make exquisite pot plauts, and associate admirably with the Snowdrop, Crocns, Hyacinth, &c, in all the elegant contrivances ingenuity can suggest for in-door decoration; as edgings to beds, &c., in the Spring flower garden, they are unique. M. Botryoides, also makes a pretty dwarf edging, growing three inches high. S. Hyacinthoides, and all the other varieties, make excellent border plants.

MISCELLANEOUS BULBS AND TUBERS.

UNDER this general heading we have classified, in alphabetical order, a great many species and varieties of general interest, one or other of which at nearly every season of the year is in itself an object of attraction. We especially recommend them to those whose taste for the cultivation of flowers extends beyond such as are merely grown for general effect.

beyond such as are merely grown for general effect. Among them will be found sorts suitable both for pot and border culture; others, again, for rock-work or similar situations, while several of those which attain a sufficient height, as the Tritomas, Arums, &c., may judiciously be planted in connectiou with shrubs, or as special groups on lawns, or in flower borders.

AGAPANTHUS UMBELLATUS (AFRICAN LILY).

An exceedingly effective plant blooming in August and September, and combining with graceful foliage large handsome heads of bloom. For the decoration of the conservatory, portico, terrace, lawn, gravel walk, sub-tropical garden, or for the side of a lake or pond, the Agapanthus is invaluable.

1197 Alstræmerias, splendid mixed, an exceedingly beautiful genus, blooming profusely from June to August. Per doz. 4s. 6d.

ANISANTHUS.

1198 Splendens, a charming greenhouse bulb, with brilliant searlet flowers, per doz. 5s. 6d.; each, 6d.

ANTHOLIZAS .- See WATSONIAS.

ANOMATHECA.

1199 Cruenta, a pretty little dwarf compact Ixia-like plant, which blooms profusely throughout the Summer, *flowers rich orange, spotted erimson*. Per doz. 2s. 6d.

APIOS (GLYCENE).

1200 Tuberosa, an ornamental hardy-climbing plant, growing freely in any loamy soil, and blooming in August, *flowers brown-pink*. Each, 6d.

ARUM.

A genus of extraordinary plants, embracing some of the most picturesque and fantastie productions of the vegetable kingdom. They are admirably adapted for the back of mixed flower borders, fronts of shrubberies, and woodland walks; their peenliar foliage, as well as extraordinary flowers, make them objects of attraction during the Spring and Summer months. All perfectly hardy, except A. criniatum, which requires the protection of a frame in Winter.
